To check if the link works, just pass the pointer over the underlined text and click it to go to the specified location. Excel has a function called Hyperlink that you can also use to create links between worksheets in the workbook. If you are not good at inserting Excel formulas immediately into the formula bar, please do as follows: Select the cell you want to add a hyperlink to. Go to the function library in the Formulas tab. Open the Lookup & Reference drop-down list and choose Hyperlink. Now you can see the function name in the formula bar. Simply enter the following two hyperlink function arguments in the dialog window: link location and friendned name. In our case, link location refers to a specific cell in another Excel worksheet, and friends is the jump text to be displayed in the cell. Observation. It is not obligatory to enter amistar name. But if you want the hyperlink to look clean and clear, I recommend doing it. If you do not type in friends name, the cell will display the link location as the jump text. Fill in the link location text box. Tip. If you do not know which address to enter, just use the selected range icon to choose the target cell. The address is displayed in the link location text box. Add the number signal (#) before the specified location. Observation. It is crucial to enter the number sign. Indicates that the location is within the current workbook. If you forget to insert it, the link will not work and an error will appear when you click it. When you move to the friendly_name text box, you see the formula result in the bottom left corner of the Function Arguments dialog box. Type Friendly Name you want to display in the cell. Click OK. You look here! All is how it should be: the formula is in the formula bar, the link is rairc rairc ed adip;Ar siam arienam A .euges ele edno raclfrev arap knil on euqilC .alul©Ac inside a workbook is using the drag and drop technique. Let me show you how it works. As an example, I will take a two-sheet workbook and create a hyperlink in Sheet 1 to a cell in Sheet 2. Note. Make sure that the workbook is saved because this method does not work in new workbooks. Select the target cell of the hyperlink in Sheet 2. Point to one of the cell borders and right-click. Hold the button and go down to the sheet tabs. Press the key Alt and mouse over the guide Sheet 1. Have the key Alt pressed automatically takes you to the other sheet. Once Sheet 1 is activated, you can stop holding the key. Keep dragging to the place where you want to insert a hyperlink. Release the right mouse button to pop-up menu appear. Choose Create hyperlink Here on the menu. After doing this, the hyperlink appears in the cell. When you click on it, you will switch to the target cell in Sheet 2. Undoubtedly dragging is the fastest way to insert a hyperlink into an Excel worksheet. Combines multiple operations in a single action. It takes less time, but a little more focus of attention than two other methods. So it depends on you where to go. You can edit an existing hyperlink in your workbook by changing your destination, appearance or text that is used to represent it. As this article deals with hyperlinks between worksheets from the same workbook, the hyperlink destination in this case is a specific cell from another worksheet. If you want to change the destination of the hyperlink, you need to modify the cell reference or choose another sheet. You can do both if necessary. Right-click the hyperlink you want to edit. Choose Edit hyperlink from the pop-up menu. The Edit Hyperlink dialog box appears on the screen. You see it looks the same as the hyperlink dialog and has the identical fields and layout. note. There are at least two more ways to open the edit hyperlink dialog box. you canCtrl + k u click hyperlink in the links group in the insert tab. but do not forget to select the necessary cell before doing it. update the information in the appropriate fields of the edit hyperlink dialog box. click ok and check where the hyperlink jumps to now. note. in case you oar method 2 to add a hyperlink to excel, you need to edit the formula to change the hyperlink destination. select the cell that contains the link, and then place the cursor in the formula bar to edit it. most time hyperlinks are shown as an underlined text of blue color. if the typical appearance of hyperlink text seems boring and you would like to stand out from the crowd, go ahead and read below how to do it: go to group styles on the home tab. open the list of cell styles. right click the hyperlink to change the appearance of the hyperlink that has not been clicked. u right-click on following hyperlink if the hyperlink has been activated. choose the option to modify in the context menu. click Formatin the styles dialog box. make the necessary changes in the Format Cells dialog window. here you can change the alignment of hyperlink and source u add fill color. when finished, click ok. Make sure all
